

Pest Tracker 2005

April 13, 2005

OFM	1st BF	2nd BF	3rd BF	4th BF	DD	DD Date		Avg. Daily DD
Yuba City	7-Mar				389	13-Apr		10.1

Notes: We are still catching very few OFM moths.

CM	1st BF	2nd BF	3rd BF	DD	DD Date			Avg. Daily DD
Dingville								
Wheatland								

Notes: In Wheatland where moths are being sexed for biofix, only males have been caught. Only 3/31, 4/1 & 4/6 had sunset temperatures 62 F or over needed for mating. 4/10 & 4/11 were very close to 62 F. Trap catches increased dramatically from 4/9 to 4/12 in Dingville and in Wheatland. I am still waiting to set a biofix. Spray timing for first flight is 3/8" nut size or 250-300 DD (once biofix is set), whichever is last.

PTB	1st BF	2nd BF	3rd BF	DD	DD Date			Avg. Daily DD
Yuba City								

Notes: No biofix yet in Yuba City

SJS	1st BF	2nd BF	DD		DD Date			Avg. Daily DD
Yuba City								

Notes: No biofix yet

OBLR	1st BF	2nd BF	DD		DD Date			Avg. Daily DD
Yuba City								

Notes: Hang traps before May 1.

Your orchard may vary from where this data was taken. It is intended as a general guide only.

Each grower should consider past history, trap counts and other input from your pest control advisor.

Yuba City location - East side of George Washington near Franklin Rd (DD calculated from a biophenometer in a peach orchard)

Dingville location near Sacramento Ave for codling moth.

Wheatland location is east of town towards Camp Far West (DD calculated using Cimis weather station in Nicolaus)
