

Pest Tracker 2004

August 9, 2004

OFM	1st BF	2nd BF	3rd BF	4th BF	DD	DD Date		Avg. Daily DD
Yuba City(high)	29-Feb	3-May	1-Jun	4-Jul	1015	9-Aug		29.0

Notes:

5th generation is projected to start anytime.

Because harvest is so early, it may be done by the time most 5th generation larvae hatch.

CM	1st BF	2nd BF	3rd BF	DD	DD Date			Avg. Daily DD
Yuba Co.(male)	20-Mar			2644	9-Aug			23.00
Yuba Co.(female)	6-Apr	9-Jun	22-Jul	450	9-Aug			23.00

Notes:

Codling moth is quite variable between orchards this season.

PTB	1st BF	2nd BF	3rd BF	DD	DD Date			Avg. Daily DD
Yuba City	12-Apr	18-Jun		1169	9-Aug			23.57

Notes: PTB has been more of a problem in peach orchards this year compared to recent years.

Watch for a third biofix around 1060 DD. We have not set ours yet. Like with OFM, harvest may be done before PTB can do anymore damage.

SJS	1st BF	2nd BF	DD		DD Date			Avg. Daily DD
Yuba City	25-Apr		2023		9-Aug			22.1

Notes:

Biofix listed is for crawlers based on sticky tape catches.

OBLR	1st BF	2nd BF	DD		DD Date			Avg. Daily DD
Yuba City	21-Apr							

NOTES: Our OBLR trap catches have been zero since June 1. We have stopped tracking degree days for OBLR

Submitted by Janine Hasey, UC Farm Advisor, Sutter and Yuba Counties, Skip Miller - Field Assistant

Your orchard may vary from where this data was taken. It is intended as a general guide only. Each grower should consider past history, trap counts and other input from your pest control advisor.

Yuba City location - George Washington near Best Rd (DD calculated from a biophenometer in a peach orchard in W. Yuba City)

Yuba County location - District 10 (DD calculated using Cimis Station in Durham, Butte County)

Rio Oso location - Wheatland Rio Oso Rd (DD calculated using Cimis Station in Nicolaus, Sutter County)
