

Pest Tracker 2009

OFM	1st BF	2nd BF	3rd BF	4th BF	5th BF	DD	DD Date		
Yuba City	3-Mar	14-May	?						

OFM Notes:

I'm not calculating DD because of my reasons stated 3 weeks ago about the model. Monitor your own orchards carefully and try to determine when the next flight begins.

PTB	1st BF	2nd BF	3rd BF	DD	DD Date				
Yuba City	18-Apr			1153	24-Jun				

Continue to watch for 2nd flight that could start anytime.

CM	1st BF	2nd BF	3rd BF	DD	DD Date				
Yuba City	20-Mar	17-Jun		178	24-Jun				
	30-Mar	17-Jun		178	24-Jun				

I'm setting 2nd flight biofix for June 17. However, there are still several orchards where CM are not being caught. Spray timing is 250-300 DD after biofix predicted around June 27-30 based on average temperatures and a June 17 biofix.

Submitted by Janine Hasey, UC Farm Advisor, Sutter and Yuba Counties

Your orchard may vary from where this data was taken. **The Pest Tracker is intended as a general guide only.**

Each grower should consider past history, trap counts, biofix and degree-days calculated from their orchard and other input from their pest control advisor to determine pest management in their orchard.

Yuba City location - **CM** - Walnut orchard on George Washington Blvd, South of O'Banion
(DD calculated using Cimis Station in Nicolaus)

OFM & PTB - Peach orchards at O'Banion and Duncan in west Yuba City
(DD calculated using Cimis Station in Nicolaus, Sutter County)
